

# CS Bridge Module 9 Arrays

## 1. Motivation

### 1.1 CS Bridge: Introduction to Static Arrays

CS Bridge: Introduction to Static Arrays

Module 9  
Itay Tal

Notes:

### 1.2 Motivation

#### Computing the Average (Revisited)

**Problem**  
Write a program that reads grades of students in a class, and prints the average.

**Example**  
Please enter the number of students in the class:  
**4**  
Enter the students' grades (separated by a space):  
**71 86 68 94**  
The class average is 79.75  
[Link to previous module.](#)

## 1.3 Calculate Average Implementation

```
#include <iostream>
using namespace std;

int main() {
    int numberOfStudents;
    int curr, sum;
    double average;

    cout<<"Please enter the number of students in the class:"<<endl;
    cin>>numberOfStudents;

    cout<<"Enter the students' grades (separated by a space):"<<endl;
    sum = 0;
    for(int i = 0; i<numberOfStudents; i++){
        cin>>curr;
        sum += curr;
    }

    average = (double)sum / (double)numberOfStudents;
    cout<<"The class average is "<<average<<endl;

    return 0;
}
```

## 1.4 Above the Average

### Above The Average

NYU TANDON  
ONLINE

#### Problem

Write a program that reads grades of students in a class, prints the average and the grades that are above the average.

#### Example

Please enter the number of students in the class:

4

Enter the students' grades (separated by a space):

71 86 68 94

The class average is 79.75

The grades above the average are

86 94

## 1.5 Implementation

```
int main ( ) {
    int x ;
    double y ;
    int arr [ 5 ] ;

    x = 4 ;
    y = 7.3 ;
    arr [ 2 ] = 10 ;
    arr [ 4 ] = 14 ;
}
```

Notes:

## 2. Array Basics

### 2.1 Array Basics

#### Basic Properties of Arrays

1) The elements are stored continuously in the memory.

2) All of the elements in an array are of the same type.

3) The elements are accessed using a 0-based index system.

Notes:

### 2.2 Basic Array Properties

#### Basic Properties of Arrays

1) The elements are stored continuously in the memory.

2) All of the elements in an array are of the same type.

3) The elements are accessed using a 0-based index system.

$(\text{address of arr}[2]) = 1000 + 2 \cdot 4 = 1008$

$(\text{address of arr}[i]) = (\text{address of arr}[0]) + i \cdot (\text{size of each element in arr})$

## 2.3 Basic Array Properties Cont'd

Basic Array Properties Cont'd

int arr [6] ;  
arr [0] = 4 ;  
arr [2] = 5 ;  
arr [5] = 7 ;  
arr [8] = 10 ;  
arr [10] = 20 ;

$(\text{address of arr}[i]) = (\text{address arr begins}) + i \cdot (\text{Size of each element in arr})$   
(address of arr [5]) = 1000 + 5 \* 4 = 1020

arr →

-2	20	992
0	4	1000
1		1004
2	5	1008
3		1012
4		1016
5	7	1020
6		1024
7		1028
8	10	1032
9		1036
10	20	1040

## 2.4 Syntactic Notes

Syntactic Notes

Static array syntax:  
1. Array's physical size must be a constant, and must be given at declaration.

double y ;

int arr [6] ;  
const int X = 7 ;  
int arr [X] ;

~~int arr [ ] ;~~  
~~int n = 7 ;~~  
~~int arr [ n ] ;~~

1000

## 2.5 Knowledge Check

(Multiple Response, 10 points, 6 attempts permitted)

## Knowledge Check

Which of the following statements about arrays are false?

- ☐ The elements are stored in memory continuously
- ☐ The elements are accessed using a 0-based index system
- ☒ The size of the array is the same number as the last index in the array
- ☐ The elements in an array must be of the same type
- ☐ You can have an empty array
- ☐ To access an element, use the [ ] symbol

Correct	Choice
	The elements are stored in memory continuously
	The elements are accessed using a 0-based index system
X	The size of the array is the same number as the last index in the array
	The elements in an array must be of the same type
	You can have an empty array
	To access an element, use the [ ] symbol

### Feedback when correct:

That's right! You selected the correct response.

### Feedback when incorrect:

## 3. Solve the Above Average Problem

### 3.1 Above The Average

#### Above the Average

NYU TANDON  
ONLINE

**Problem**  
Write a program that reads grades of students in a class, prints the average and the grades that are above the average.

**Example**  
Please enter the number of students in the class:  
**4**  
Enter the students' grades (separated by a space):  
**71 86 68 94**  
The class average is 79.75  
The grades above the average are  
**86 94**

### 3.2 Above Average 1

```
#include <iostream>
using namespace std;

int main(){
    return 0;
}
```

### 3.3 Above Average Cont'd

**Above Average Cont'd**

NYU TANDON ONLINE

```
#include <iostream>
using namespace std;

const int MAX_CLASS_SIZE = 60;

int main() {
    int numOfStudents;
    int gradesList[MAX_CLASS_SIZE];
    int currGrade;
    int ind;

    cout<<"Please enter the numbers of students in the class
(no more than "<<MAX_CLASS_SIZE<<")"
    <<endl;
    cin>>numOfStudents;

    //reading the grades
    for (ind = 0; ind < numOfStudents; ind++) {
        cin>>currGrade;
        gradesList[ind] = currGrade;
    }

    //calculating the average
    // print grades above the average
    return 0;
}
```

numOfStudents: 4  
gradesList: 71, 86, 68, 94  
currGrade: 71, 86, 68, 94  
ind: 0, 1, 2, 3

### 3.4 Above Average Cont'd

```
#include <iostream>
using namespace std;

const int MAX_CLASS_SIZE = 60;

int main(){
    int numOfStudents;
    int gradesList[MAX_CLASS_SIZE];
    int currGrade;
    int ind;

    cout<<"Please enter the number of students in the class (no more than "<<MAX_CLASS_SIZE<<")"
    <<endl;
    cin>>numOfStudents;

    //reading the grades
    for (ind = 0; ind < numOfStudents; ind++) {
        cin>>currGrade;
        gradesList[ind] = currGrade;
    }

    //calculating the average
    //print grades above the average
    return 0;
}
```

### 3.5 Above Average Cont'd

**Above Average Implementation**

NYU TANDON ONLINE

```
#include <iostream>
using namespace std;
const int MAX_CLASS_SIZE = 60;
int main() {
    int numOfStudents;
    int gradesList[MAX_CLASS_SIZE];
    int currGrade;
    int ind;

    cout<<"Please enter the numbers of students in the class
(no more than "<<MAX_CLASS_SIZE<<")"
    <<endl;
    cin>>numOfStudents;

    //reading the grades
    for (ind = 0; ind < numOfStudents; ind++) {
        cin>>currGrade;
        gradesList[ind] = currGrade;
    }

    //calculating the average
    sum = 0;
    for (ind = 0; ind < numOfStudents; ind++) {
        sum += gradesList[ind];
    }
    average = (double)sum / (double)numOfStudents;
    cout<<"The class average is " <<average<<endl;
    // print grades above the average
    return 0;
}
```

numOfStudents: 4  
gradesList: 71, 86, 68, 94  
currGrade: 71, 86, 68, 94  
ind: 0, 1, 2, 3  
sum: 0, 71, 157, 225, 319  
average: 79.75

### 3.6 Above Average Cont'd

```
#include <iostream>
using namespace std;

const int MAX_CLASS_SIZE = 60;

int main(){
    int numOfStudents;
    int gradesList[MAX_CLASS_SIZE];
    int currGrade;
    int ind, sum;
    double average;

    cout<<"Please enter the number of students in the class (no more than "<<MAX_CLASS_SIZE<<)"
    <<endl;
    cin>>numOfStudents;

    //reading the grades
    for (ind = 0; ind < numOfStudents; ind++) {
        cin>>currGrade;
        gradesList[ind] = currGrade;
    }

    //calculating the average
    sum = 0;
    for (ind = 0; ind < numOfStudents; ind++) {
        sum += gradesList[ind];
    }
    average = (double)sum / (double)numOfStudents;
    cout<<"The class average is "<<average<<endl;

    //print grades above the average
}
```

Notes:

## 4. Additional Syntactic Notes for Static Arrays

### 4.1 Syntactic Notes

### Syntactic Notes

Basic properties of array (at declaration)

1. The element size must be a constant and memory must be given at declaration.
2. All of the elements in an array are of the same type.
3. The elements are accessed using a 0-based index system.
2. Array's name is a legal C++ expression.

Address of arr[i] = (address of arr begins) + i \* (Size of each element in arr).

It's value is the address in the memory where the array starts.

5	arr →	1000
7	0	1004
6	1	1008
8	2	1012
0	3	1016
0	4	1020

### 4.2 Knowledge Check

(Multiple Choice, 10 points, unlimited attempts permitted)

## Knowledge Check

In the following code, what is the value of fib[7]?

```
const int size = 20;
int main(){
int fib[size];
fib[0];
fib[1]=1;
for (int i=2; i<21; i++)
    fib[i]=fib[i-1]+fib[i-2]
return 0;
}
```

- ☐ 8
- ☒ 13
- ☐ 21
- ☐ 5

Correct	Choice	Feedback
	8	Incorrect, this is the value of fib[6]
X	13	Correct!
	21	Incorrect, this is the value of fib[8]
	5	Incorrect, this is the value of fib[5]
